VPN Setup and Troubleshooting

IT Policy §3.2 — Remote Access

GlobalProtect VPN is required for all remote access to company systems. To connect: open GlobalProtect app and click Connect. Use your SSO credentials. Common issues: Error 90 means your credentials are cached — log out and back in. If the tunnel drops repeatedly, try toggling Airplane Mode or restarting the GlobalProtect service via Task Manager > Services. VPN is mandatory outside office premises. Repeated failures should be escalated to IT L2. Split tunneling is disabled by policy. Only approved VPN clients (GlobalProtect v6+) are supported. Unauthorized VPN tools are a security violation.

IT

Password Reset and Account Lockout

IT Security §7.1 — Password Management

Self-service password reset is available at reset.company.com. Requirements: minimum 12 characters, uppercase, number, special character. MFA is required to verify identity before reset. Account lockout occurs after 5 failed attempts. Accounts unlock automatically after 30 minutes, or immediately via self-service. Do not share passwords. Password managers (1Password, Bitwarden) are approved. Passwords must not be reused from the last 10. SSO is used for all major applications — resetting your corporate password resets access to Gmail, Slack, Jira, Confluence.

IT

Laptop and Hardware Requests

IT Policy §2.4 — Hardware Lifecycle

New hardware requests must be submitted by your manager via ServiceNow > Hardware Request. Standard approval takes 3 business days. Delivery time is 1–2 weeks depending on model and stock. Standard issue is a Dell Latitude (Windows) or MacBook Pro 14" (macOS). Apple Silicon Macs are available for engineering roles. Hardware refresh cycle is every 3 years. For repairs, submit a ticket and an IT tech will contact you within 4 business hours. Loaner devices are available for urgent cases. Peripherals (mouse, keyboard, headset) are self-service from office supply room.

IT

Multi-Factor Authentication Setup

IT Security §4.2 — MFA

MFA is mandatory for all corporate accounts. Supported methods: Microsoft Authenticator (preferred), Google Authenticator, hardware FIDO2 key (YubiKey). Setup at myaccount.company.com > Security > Add sign-in method. Backup codes are available on the same page — store them securely. If you lose your authenticator, contact IT immediately. Biometric options (fingerprint/face) are allowed on approved devices. SMS OTP is deprecated and will be disabled Q1 next year. MFA fatigue attacks: never approve a push you didn't initiate.

IT

Software Installation and Licensing

IT Policy §5.1 — Software Management

Request software via ServiceNow > Software Request. Standard catalog: Microsoft 365, Slack, Zoom, 1Password, Figma, VS Code. Engineering gets JetBrains IDEs, GitHub Copilot, Docker. Design gets Adobe Creative Cloud. Finance gets Bloomberg Terminal. Unlicensed software is prohibited and may be removed. Open source is allowed for development but must be reviewed by security if internet-facing. Software purchased personally cannot be expensed without pre-approval. Licenses are tracked in Snow License Manager.

IT

Email and Outlook Configuration

IT Policy §6.1 — Communications

Corporate email is hosted on Microsoft 365. Access via Outlook desktop, Outlook Web App at outlook.com, or mobile Outlook app. Sync email to personal devices requires MDE enrollment. VPN must be used when on public/home networks. Bandwidth-intensive applications (streaming video, gaming) on Corp-Secure are restricted. Network firewall blocks known malicious IPs and all Tor exit nodes.
